

Project 1-004 | Automated Steelyard storage Terminal system

Loading and unloading control system for Steel Authority of India – Steelyard at New Bombay

Large finished products were to be transported into and out of Steelyard for SAIL, and to be cataloged with Truck tracking system and product tagging. We designed and implemented total solution for SAIL including the scale structure design, load cells, platforms, access ramps, weighing systems and product inventory management system.

The Automated scale system for long bedded trucks of 80 feet structure were also implemented with corner compensation techniques for the Load cells due to the large size platforms.
